

MULTI-POINT BET SURFACE AREA ANALYSER

**Photo of Instrument:**

<b>Instrument Name</b>	Multi-point BET Surface area analyser
<b>Instrument Model &amp; Serial No.</b>	Smart SORB-93
<b>Instrument Make</b>	Smart Instruments
<b>Category of Instrument</b>	Characterization and Testing
<b>Description of Instrument</b>	BET surface area analyzer is one of the most used methods to measure and analyze the surface area of porous materials and nanoparticles. This physical characterization technique provides quantitative data on the specific surface area and pore volume of the solid materials. The method is suitable for a wide range of solid matrices, from catalyst powders to monolithic materials.
<b>Instrument Technical Description and Major Specifications (This Specifications Limited to Major 5)</b>	<p>Smart Sorb 93, Surface Area Analyser is based on the dynamic BET principle. Nitrogen gas is used for adsorption. The dynamic flow method uses a highly sensitive thermal conductivity detector to measure the change in the concentration of an adsorbate/carrier gas mixture during the adsorption or desorption process. It determines the surface area at a single point and it can be enhanced for measuring multi-point surface area and total pore volume analysis with different gas mixture percentages.</p> <ul style="list-style-type: none"> <li>• Surface Area range - 0.1 m<sup>2</sup>/gm to 1500 m<sup>2</sup>/gm - Normal. Extendable up to 2500 m<sup>2</sup>/gm.</li> <li>• Accuracy - Typically better than ± 5%</li> <li>• Reproducibility - Typically better than ± 3%</li> </ul>

## Department of Mechanical Engineering, NIT Calicut

	<ul style="list-style-type: none"> <li>• Regeneration System Temperature Range: Ambient to 300°C</li> <li>• Sample holder capacity - 7 ml</li> </ul>
<b>Application of Instrument</b> (Limited to Major 4 or 5)	<p>For inspecting the surface area and pore volume of</p> <ul style="list-style-type: none"> <li>• Catalysts for automotive, fertilizers and petrochemical industries</li> <li>• Carbon powder for rubber, adsorbents (gas separation and water purification), gas masks, inks, laser printers etc</li> <li>• Minerals such as alumina, clays, pigments, phosphates, silica, zirconia etc</li> <li>• abrasives, adsorbents, biomaterials, ceramics, cement, etc</li> </ul>
<b>Type of Sample Required for Analysis / Testing (Quantity, Pre-Preparation, State etc.)</b> <b>Guidelines for Sample Submission – User Instructions</b>	<ul style="list-style-type: none"> <li>• <b>Type of Sample:</b> Powders of particle size less than 2 mm</li> <li>• <b>Instruction to the users:</b> Before doing the analysis, users may share the information about the expected range of surface area for their samples with the instrument operator.</li> </ul>
<b>Types of Analysis / Testing</b>	<ol style="list-style-type: none"> <li>1. BET surface area analysis <ul style="list-style-type: none"> <li>• Determination of surface area by using single carrier gas mixture</li> </ul> </li> <li>2. BET Multi-point surface area analysis <ul style="list-style-type: none"> <li>• Determination of surface area by a minimum of three carrier gas mixtures</li> <li>• Requires a minimum of three experimental runs</li> </ul> </li> <li>3. Pore volume analysis <ul style="list-style-type: none"> <li>• Determination of pore volume and average pore diameter (values only)</li> </ul> </li> </ol>
<b>Faculty In-Charge Name / Email / Contact</b>	<p>Dr. Mohammed Rashad K, rashad@nitc.ac.in, 9744899126  Dr. Jinu Paul, jinupaul@nitc.ac.in, 9002279620</p>
<b>Technical Staff Name / Email / Contact</b>	<p>Mr. Sanal P R, sanal@nitc.ac.in, 9497186559</p>
